

GRADUATE STUDENT IMMUNIZATION

All graduate students must complete and submit this form to Student Health Services.

If attending in fall form is due July 31

If attending in spring form is due January 1

Incomplete or overdue forms will delay or cancel registration and prevent sports participation.

Mail form to:STUDENT HEALTH SERVICES Butler Building PO Box 1923 Niagara University, NY 14109-1923

Fax form to: 716.286.8391 Phone: 716.286.8390

CONSENT TO TREAT, ATTESTATION, AUTHORIZATION FOR MYNIAGARA HEALTH PORTAL

Without signature Student Health Services cannot treat this student. Parent or Guardian must sign for student under 18 years of age.

I authorize the I authorize the Niagara University's Student Health Services to provide care and treatment to me (my child/legal ward) as deemed appropriate. This includes but is not limited to routine, urgent, emergency care, medication, immunization, diagnostic studies and referrals to hospitals, clinics and/or medical specialists deemed necessary by the college's medical and/or nursing staff. In the event of a life threatening emergency or serious illness/injury of which the Student Health Services is aware, I authorize the Student Health Services or college designee to notify my emergency contact. I verify that all medical and psychological information I have provided is complete and accurate. I will notify the Student Health Services hereafter of any changes in my health that occur while a student at Niagara University. I authorize Student Health Services to communicate with me using my secure health portal, myNuHealth. This communication may include but is not limited to lab results, clinical notes and additional medical recommendations for my ongoing care and treatment each semester I am a registered student at the college. Access to myNuHealth is limited to the current semester enrolled.

WHAT IS MENINGOCOCCAL DISEASE?

Meningococcal disease is caused by bacteria called Neisseria meningitidis. It can lead to serious blood infections. When the linings of the brain and spinal cord become inflamed, it is called meningitis. The disease strikes quickly and can have serious complications, including death.

WHO GETS MEINGOCOCCAL DISEASE?

Anyone can get meningococcal disease. Some people are at higher risk. This disease occurs more often in people who are:

- Teenagers or young adults
- · Infants younger than one year of age
- · Living in crowded settings, such as college dormitories or military barracks
- Traveling to areas outside of the United States, such as the "meningitis belt" in Africa
- Living with a damaged spleen or no spleen
- · Being treated with Soliris® or, who have complement component deficiency (an inherited immune disorder)
- · Exposed during an outbreak
- Working with meningococcal bacteria in a laboratory

WHAT ARE THE SYMPTOMS? Symptoms appear suddenly – usually 3 to 4 days after a person is infected. It can take up to 10 days to develop symptoms. Symptoms may include:

• A sudden high fever

Headache

- · Nausea and vomiting
- Red-purple skin rash
- · Stiff neck (meningitis) · Weakness and feeling very ill
- · Eyes sensitive to light

HOW IS MENINGOCOCCAL DISEASE SPREAD?

It spreads from person-to-person by coughing or coming into close or lengthy contact with someone who is sick or who carries the bacteria. Contact includes kissing, sharing drinks, or living together. Up to one in 10 people carry meningococcal bacteria in their nose or throat without getting sick.

IS THERE TREATMENT?

Early diagnosis of meningococcal disease is very important. If it is caught early, meningococcal disease can be treated with antibiotics. But, sometimes the infection has caused too much damage for antibiotics to prevent death or serious long-term problems. Most people need to be cared for in a hospital due to serious, life-threatening infections.

WHAT ARE THE COMPLICATIONS?

Ten to 15 percent of those who get meningococcal disease die. Among survivors, as many as one in five will have permanent disabilities. Complications include: Hearing loss, brain damage, kidney damage and/or limb amputation.

WHAT SHOULD I DO IF I OR SOMEONE I LOVE IS EXPOSED?

If you are in close contact with a person with meningococcal disease, talk with your health care provider about the risk to you and your family. They can prescribe an antibiotic to prevent the disease.

WHAT IS THE BEST WAY TO PREVENT MENINGOCOCCAL DISEASE?

The single best way to prevent this disease is to be vaccinated. Vaccines are available for people 6 weeks of age and older.

Various vaccines offer protection against the five major strains of bacteria that cause meningococcal disease:

- All teenagers should receive two doses of vaccine against strains A, C, W and Y. The first dose is given at 11 to 12 years of age, and the second dose (booster) at age 16.
- It is important that teens receive the booster dose at age 16 in order to protect them through the years when they are at greatest risk of meningococcal disease.
- Talk to your health care provider today if your teen has not received two doses of vaccine against meningococcal strains A. C. W and Y.
- · College students can also be vaccinated against the "B" strain. Talk to your health care provider about whether they recommend vaccine against the "B" strain.

Others who should receive the vaccine include:

- · Infants, children and adults with certain medical conditions
- · People exposed during an outbreak

- · Travelers to the "meningitis belt" of sub-Saharan Africa
- · Military recruits

IS THERE AN INCREASED RISK FOR MENINGOCOCCAL DISEASE IF I TRAVEL?

Meningococcal disease and outbreaks occur in the United States and around the world. The disease is more common in the "meningitis belt" of sub-Saharan Africa. The risk is highest in people who visit these countries and who have prolonged contact with local populations during an epidemic. To reduce your risk of illness, wash your hands often, maintain healthy habits such as getting plenty of rest and try not to come into contact with people who are sick.

HOW DO I GET MORE INFORMATION ABOUT MENINGOCOCCAL DISEASE AND VACCINATION?

www.cdc.gov/meningococcal/ OR www.health.ny.gov/prevention/immunization/

I have read or have had explained to me, the information regarding meningococcal meningitis. I understand the risks of not receiving the vaccine. I have decided that I (my child) will NOT obtain immunization against meningococcal disease.

On-Site Medications at Niagara University Health Services

Niagara University Health Services offers a limited selection of commonly used medications to support student health and wellness. These include, but are not limited to:

- Select antibiotics
- Pain relievers / antipyretics
- · Cold and flu medications
- Breathing treatments
- Skin irritation/Rashes

We stock medications based on the most frequent illnesses seen in our student population. All prices are based on our cost from the vendor—no markup is added. Most medications range from \$5 to \$20, with the majority priced at \$5. Please note: We do not dispense or prescribe any controlled substances or narcotics.

Convenience for Students

We understand that students often have limited time and may face transportation challenges. For your convenience, stocked medications may be dispensed on-site at the time of your visit.

- No payment is due at the time of service
- Charges are billed directly to your student account

Using Your Own Prescription Plan

If you prefer to use your health insurance prescription plan instead, you are welcome to do so. In this case, you will be responsible for:

- Obtaining the medication from a pharmacy of your choice
- Providing your own transportation

Important: If you choose to decline on-site medication, please inform Health Services staff <u>before</u> any medication is dispensed.
